EDUCATION

University of California, Berkeley

Expected Dec 2026

Dual B.A., Economics and Data Science

Relevant Coursework: Data Structures (CS 61B), The Structure and Interpretation of Computer Programs (CS 61A), Introduction to Artificial Intelligence (CS 188), Principles & Techniques of Data Science (Data C100), Linear Algebra (Math 56), Probability for Data Science (Data C140).

In progress, Fall 2026: Data Mining and Analytics (Data 144), Data, Inference, and Decisions (Data C102), Introduction to Time Series (Stat 153).

CS 61B Project 3 (three-person team, Nov to Dec 2024): procedural world generation, state management, Game.java, save and replay.

EXPERIENCE

breakouts.trade

Feb 2025 – Present

Founder & Engineer

- Built a browser drill app for breakout patterns and a daily scanner on the same strategy code: 458 signups, ~240 activated users, 10,203 practice drills.
- Replaced a stock-metadata cold path that fanned out ~18,000 Storage reads and timed out on every cold start with one precomputed artifact, single-flighted loads and a 24 h cache, and added a unit test that proves the fan-out is gone.
- Wrote 71 test files, ~611 cases, across ~110,000 tracked TypeScript lines.
- Ran CI on every pull request and push to main, type-check, lint, tests and build, across five GitHub Actions workflows, and made 1,917 commits across both codebases as the repositories' only contributor.
- Hand-wrote 22 idempotent SQL migrations and 13 row-level-security policies with no ORM, and gated quotas with one insert that fails closed.
- Reviewed all 67 API route handlers and middleware in June 2026 and found one Critical, a credentials provider that accepted a literal password as proof of Google identity and opened pre-auth account takeover for any known address, then fixed and re-verified it with server-side, audience-pinned checks of the raw Google ID token.
- Shipped an IBKR robot (ib_async) that has traded real money since June 2026: Restart=always systemd units, a kill switch, broker-versus-journal reconciliation every five minutes, a SQLite latch that claims each scan-date-and-ticker pair once so a clean restart does not double-enter, and a heartbeat that names the running commit.
- Found and fixed, on 9 Sep 2026, a nightly CI step that had never once succeeded since the workflow landed, where a trailing shell fallback turned the failure into a warning.
- Wrote nine mutation-verified look-ahead guard tests and determinism tests, and fuzzed the live exit machine against the research exit oracle across 4,000 parity cases.
- Backtested 66,753 trades, 1998–2026, survivorship-free, and ran the 2024–2026 holdout once at mean R = 2.61.

Startup-Idea Ranker

Aug 2026

Independent Research

- Ranked 58,873 company descriptions from 2013 against 2024 outcomes, voided a passing run when a leak battery caught the label encoded in the judge's item identifier, and scored the fixed run at precision@3 = 0.3810 against an 8.00% within-stratum base rate.

Incurra (incurra.ai)

Jul 2026 – Aug 2026

Founder

- Built an LLM tool in Python, DuckDB, Parquet and the Anthropic API that read adjuster notes on open commercial-auto claims and flagged a documented fact the carried reserve did not reflect, and closed it in August on a kill criterion written before the build.

North Central Ohio Pollinator Pathway and Sustainable Delaware Ohio

Dec 2023 – Jul 2024

Full-Stack Developer

- Built websites for two environmental nonprofits as the sole developer, handed them off in May 2024 and supported the owners through July, and both sites have run on their own since.

necoTECH

May 2023 – Sep 2023

Data & Product Intern

- Automated lead tracking in Python and cleaned proposal data, consolidating CRM, proposal and marketing workflows across three teams.

TECHNICAL SKILLS

SQL, Python, TypeScript/JavaScript, Java (coursework), React, Next.js, PostgreSQL/Supabase, REST/OpenAPI, Vitest, pytest, Playwright, GitHub Actions, Linux, AWS (SES, boto3).

Eagle Scout: Led 100 volunteers on a community trail expansion (Oct 2023)
