EDUCATION

University of California, Berkeley

Expected Dec 2026

Dual B.A. Economics & Data Science

Relevant Coursework: Principles & Techniques of Data Science (Data C100); Econometrics: Advanced Methods & Applications (Econ 143); Probability for Data Science (Data C140); Data Structures (CS 61B); Introduction to Artificial Intelligence (CS 188); Linear Algebra (Math 56).

In progress, Fall 2026: Data, Inference & Decisions (Data C102); Introduction to Time Series (Stat 153); Data Mining & Analytics (Data 144).

EXPERIENCE

breakouts.trade

Feb 2025 – Present

Founder & Engineer

Quant Engine — breakouts-engine (Python)

- Built a systematic channel-breakout engine and validated it on a fresh 2024–2026 holdout touched exactly once — mean $R = 2.61$, 95% CI [2.36–2.87] by percentile bootstrap — behind a survivorship-free backtest of 66,753 trades over 1998–2026: +3.18R mean, 36.9% win rate, driven entirely by the right tail against a -1.05R median.
- Designed a walk-forward, fractional-Kelly ML sizing model (refit yearly on prior data only) predicting per-trade expected R , gated by a market-regime filter.
- Built and deployed an automated IBKR trading robot (ib_async) — regime-gated, ML-sized entries on settled cash — running on a real-money account since June 2026 as a systemd service with a kill switch.
- Wrote a 668-test parity, look-ahead and survivorship-bias suite that blocks data leakage and holds the live robot at order-and-fill parity with the research backtest; every live execution reconciles against broker statements to the cent.
- Built a nightly Polygon.io → parquet market-data pipeline and a 1,500-ticker breakout scanner, running unattended on GitHub Actions with a cached data lake (1–2 min per incremental run).

Web Product — breakouts-trade (Next.js)

- Launched a Duolingo-style breakout-training app + live scanner on the same engine: 458 signups across 6 continents, ~240 activated users, 10,203 practice drills.
- Shipped 1,917 commits as the repositories' only contributor: Next.js 15 / React 19, Supabase/Postgres, Stripe, Google OAuth, Redis, and web-push/SMS/email alerts; Railway + VPS, GitHub Actions CI, Sentry.
- Designed one canonical rule/exit engine shared across the backtest, the drill, the live scanner and the robot — so the setup a user practices is exactly the one they trade.

Incurra (incurra.ai)

Jul – Aug 2026

Founder

- Built an LLM tool that read adjuster notes on open commercial-auto claims and flagged where a documented fact was not reflected in the carried reserve — a reconciliation tool, not a prediction model, so there was no confidence score anyone had to take on trust. Python, Polars, DuckDB, Parquet, Anthropic API; took it to claims departments and MGAs myself.
- Closed it in August on a kill criterion written before the build rather than defending it.

Startup-Idea Ranker

Aug 2026

Independent Research

- Backtested whether an LLM can rank early-stage companies on 58,873 company descriptions written in 2013 against 2024 outcomes, screening out every company the model could recognize (42.7% → 5.4%) so name recall could not carry the result.
- precision@3 = 0.381 [0.250, 0.532], 4.8x the 8.0% base rate, beating five controls with every paired-bootstrap CI excluding zero; reproduced at 0.357 by a fresh instance. Six earlier designs were killed on criteria registered before each run.

Sustainable Delaware Ohio & N.C. Ohio Pollinator Pathway

Dec 2023 – Jul 2024

Full-Stack Developer

- Sole developer for two environmental nonprofits: led technical decisions with non-technical stakeholders and shipped each organization's website end-to-end — design, build, hosting, content — handing off sites they could maintain themselves.

necoTECH

May – Sep 2023

Data & Product Intern

- Automated Python lead-tracking and cleaned proposal data, consolidating CRM, proposal and marketing workflows across three teams.

TECHNICAL SKILLS

Python · TypeScript · SQL · Next.js · React · Node · PostgreSQL/Supabase · pandas · numpy · scikit-learn · statsmodels · Polars · DuckDB · IBKR API (ib_async) · Polygon.io · Stripe · Redis · Docker · GitHub Actions · Anthropic API · Railway/Vercel

Eagle Scout — Led 100 volunteers on a community trail expansion (Oct 2023)
